J. Biol. Chem. 275:18418-18423 (2000).

1. FUNCTION: Transcriptional corepressor that binds to a number of transcription factors. Inhibits the transcriptional activation mediated by CTNNB1 and TCF family members in Wnt signaling. The effects of full-length TLE family members may be modulated by association with dominant-negative AES (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Transducin-like enhancer of split proteins, the human homologs

SUBCELLULAR LOCATION: Nuclear.

TISSUE SPECIFICITY: Highly expressed in adrenal gland, intestine, kidney, lung, ovary and thyroid. Detected at levels in pitultary, hippocampus, cortex, cerebellum ar INDUCTION: By kainic acid in the dentate gyrus.

SIMILARITY: Contains 7 WD repeats.

SIMILARITY: BELONGS TO THE GROUCHO/TLE FAMILY OF WD-RE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                s SWISS-PROT entry is copyright. -!- FUNCTION: Transcriptional corepressor that binds to a number of transcription factors. Inhibite transcriptional activation mediated by CINNB1 and TCF family members in Whit signaling. The effects of full-length TLE family members may be modulated by association with dominant-negative AES (By similarity). May play
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      +
